

Fiction?: Matter and Interactions.

Each force or interaction is a topological space.

The interaction between two or more spaces produces physical properties such as charge and mass.

The observation space is a factor in how matter and interactions manifest.

Each space is induced by the physical matter it manifests.

The angular displacement between two or more spaces influences the physical properties of matter. The angular displacement of the observation space is similarly a factor.

The speed of light is an absolute limit within a space. The intersection between two spaces can manifest at speeds beyond the speed of light.
